

Start building
distributed applications
with ease using
building block APIs

Deze sessie (met veel code) behandelt de verschillende bouwstenen van Dapr: service-aanroep, pub/sub-berichten, staatswinkels, geheime winkels, bindingen en workflow. Codevoorbeelden en live demo's worden geleverd in JavaScript en .NET.

runtime

dapr

What is Dapr?

Dapr is a portable, event-driven, runtime for building distributed applications across cloud and edge.

virtual or
physical machines

Why use Dapr?

Speeds up microservice development by providing a common set of **building block APIs**.

Building block APIs

Service invocation

State Management

Publish & subscribe

Redis

When to use Dapr?

You are in a large organisation
with many different teams or
tech stacks.

Greenfield projects: postpone
your architecture decisions.

When **not** to use Dapr?

If your team is allergic to
containers & Kubernetes ;)
